

Anti-Phospho-Ser⁷⁷⁴ Dynamin

Catalog Number: SY-p1050-774

Size: 100 μ l

\$375.00

Product Description: Affinity purified sheep polyclonal antibody

Applications: **WB:** 1:1000
IF (fixed cultured neurons; Tan et al., 2003): 1:1000
IHC (fixed cultured neurons, Tan et al., 2003): 1:1000

Antigen: Phosphopeptide corresponding to amino acid residues surrounding the phospho-Ser⁷⁷⁴ of rat dynamin.

Specifies reactivity: The antibody has been directly tested for reactivity in Western blots with rat tissue. It is anticipated that the antibody will react with bovine, canine, chicken, human, mouse and non-human primates based on the fact that these species have 100% homology with the amino acid sequence used as antigen.

Biological Significance: Dynamin is a member of a group of nerve terminal proteins called dephosphins that regulate synaptic vesicle endocytosis (Cousin et al., 2001; Graham et al., 2002; Tsuboi et al., 2002). Cyclin dependent protein kinase 5 phosphorylates dynamin at Ser⁷⁷⁴ and Ser⁷⁷⁸ that are the phosphorylation sites on dynamin phosphorylated *in vivo* (Tan et al., 2003). Phosphorylation of these sites on dynamin is thought to play a key role in synaptic vesicle trafficking.

Anti-Phospho Ser⁷⁷⁴ Dynamin

Western blot of rat hippocampal lysate stimulated with forskolin showing specific immunolabeling of the ~95k dynamin phosphorylated at Ser⁷⁷⁴ (Control). The phosphospecificity of this labeling is shown in the second lane (*lambda*-phosphatase: λ -Ptase). The blot is identical to the control except that it was incubated in λ -Ptase (1200 units for 30 min) before being exposed to the phospho-Ser⁷⁷⁴ dynamin. The immunolabeling is completely eliminated by treatment with λ -Ptase.

WB = Western Blot **IF** = Immunofluorescence **IHC** = Immunohistochemistry **IP** = Immunoprecipitation

Packaging: 100 μ l in 10 mM HEPES (pH 7.5), 150 mM NaCl, 100 μ g BSA per ml and 50% glycerol. Adequate amount of material to conduct 10-mini Western Blots.

Storage and Stability. For long term storage -20°C is recommended. Stable at -20°C for at least 1 year.

Shipment: Domestic - Blue Ice; International - Dry Ice.

Purification Method: Prepared from sheep serum by affinity purification via sequential chromatography on phospho- and dephosphopeptide affinity columns.

Antibody Specificity: Specific for the ~95k dynamin protein phosphorylated at Ser⁷⁷⁴. Labels the purified protein phosphorylated *in vitro* by cdk5 but not by PKC. Does not cross react with other purified substrates of cdk5 (e.g. amphiphysin and synapsin). Immunolabeling is blocked by λ -phosphatase treatment.

Quality Control Tests: Western blots performed on each lot.
