REEP1 Antibody - Background

REEP1 (receptor expression-enhancing protein 1), is a 201 amino acid multi-pass mitochondrion membrane protein that belongs to the DP1 family. REEP1 interacts with odorant receptor proteins and may enhance the cell surface expression of odorant receptors (1, 2). It is also required for endoplasmic-reticulum network formation shaping and remodeling by linking ER tubules to the cytoskeleton (2). Mutations in the REEP1 gene are a common cause of hereditary spastic paraplegia (HSP). Mutations in the REEP1 gene also cause spastic paraplegia autosomal dominant type 31, a neurodegenerative disorder (3).
