

# CD1B3 (CC122): sc-101831

## BACKGROUND

The CD1 multigene family encodes five forms of the CD1 T-cell surface glycoprotein in human, designated CD1A, 1B, 1C, 1D and 1E. CD1 is a type I membrane protein that has structural similarity to the MHC class I antigen and is present on lipid antigens for recognition by T lymphocytes. CD1 antigens are associated with  $\beta$ -2-Microglobulin and are expressed on cortical thymocytes, Langerhans cells, a B cell subset and a few dendritic cells. Adaptor-protein complexes and CD1-associated chaperones control CD1 trafficking, as well as the development and activation of CD1-restricted T cells. Constitutive endocytosis of CD1B molecules and the differential sorting of MHC class II from lysosomes separate peptide- and lipid antigen-presenting molecules during dendritic cell maturation. CD1B is also expressed in interdigitating cells. CD1B3 is a 333 amino acid member of the CD1 multigene family.

## APPLICATIONS

CD1B3 (CC122) is recommended for detection of CD1B3 of human, bovine and ovine origin by Western Blotting (starting dilution 1:200, dilution range 1:100-1:1000), immunoprecipitation [1-2  $\mu$ g per 100-500  $\mu$ g of total protein (1 ml of cell lysate)] and flow cytometry (1  $\mu$ g per 1 x 10<sup>6</sup> cells).

CD1B3 (CC122) is also recommended for detection of CD1B3 in additional species, including bovine and ovine.

Molecular Weight of ovine CD1B3: 26 kDa.

Molecular Weight of bovine CD1B3: 37 kDa.

Positive Controls: ALL-SIL whole cell lysate: sc-364356, CCRF-CEM cell lysate: sc-2225 or SUP-T1 whole cell lysate: sc-364796.

## RECOMMENDED SUPPORT REAGENTS
